

THE 10 THINGS TO LOOK FOR IN AN IFT PARTNER

When considering a strategic transportation partner, focus on companies with depth and flexibility and insist on the following essential Interfacility Transport services.

1

Comprehensive Data Reports allow you to analyze daily, monthly and quarterly system response data to ensure the prompt identification of changes in demand trends and on-time performance.

2

On Time Performance Management ensures accountability, transparency and compliance with all hospital requirements and specifications.

3

Patient Flow Management Services prevent delays in treatment and admissions by sending patients to the appropriate level of care.

4

Discharge Management Services reduce wait times and accelerate the discharge process by having transport ready as soon as the orders are cleared.

5

Online Ordering Systems simplify the ordering process, ensure transport levels align with patient medical necessity and provide efficiencies to manage and limit financial liability related to transportation.

6

Demand Analysis Platforms provide near real-time surveillance of staffing and equipment requirements and on-time performance metrics.

7

Computer Assisted Dispatch improves on-time reliability and streamlines the ambulance ordering process while also providing an integrated geographic information system solution.

8

Electronic Patient Care Records give out-of-hospital caregivers the ability to enter patient data in real time and transmit it to the receiving facility.

9

Comprehensive Billing Services lead to accurate billing and higher patient satisfaction ratings by ensuring that services are reimbursed appropriately by payers.

10

Clinical Excellence with Physician Oversight ensures an organization-wide focus on clinical performance and that the pre and post-hospital experience reflects the high quality of in-hospital care.
