

SAFETY TIPS: HOUSEHOLD POISONS SAFETY

Poisoning is the second leading cause of unintentional death in the United States, behind only motor vehicle accidents.

Nearly half of the 2 million calls to Poison Help Numbers last year involved children ages five and under and nine out of 10 poisonings occurred at home.

Take the following steps to make your home poison-safe:

Properly close caps on medicines, vitamins and herbal supplements

Ensure all battery compartments on toys and games are securely closed

Keep all medicines (including vitamins and herbal supplements), household cleaning products, and garden chemicals on high shelves or in locked

Install a carbon monoxide detector and check the batteries twice a year

Keep items in their original containers with the labels intact

Follow the directions on pesticide labels and be sure to remove children, pets and toys from treated areas

Never mix household cleaning products together - mixing can cause poisonous gasses

Most importantly, post the National Poison Help number by your home phone and program it into cell phones: 800-222-1222
